How to Determine Which Model of Nursery Jaws To Purchase

By asking the right questions, you can easily determine which Nursery Jaws best fit your operation. For example, a small landscaper with a 1200lb. lift capacity loader does not need a Nursery Jaws 2 - Pallet Fork Option. Conversely, a large wholesaler with a 3000lb. capacity loader should not have a Nursery Jaws Jr. There are, of course, exceptions to every rule, but, here are a few guidelines to follow.

MINI JAWS

What materials will the Mini handle?

Up to 32" B&B, plastic containers, & small rocks, depending on loader.

Loader requirements? Compact Mini Skid steers only 500lb–800lb capacity.

Characteristics of the Mini Jaws? Light weight (100lbs) for compact loaders; compact for use in tight spaces; (30" or 42" forks), and narrow fork spacing (parallel at 17").

NURSERY JAWS JR.

What materials will the NJ Jr. handle? Up to 36" B&B; 20"-24" boxes; plastic containers; small rocks & boulders.

Loader requirements? 1500lbs. rated capacity and less.

Characteristics of the Nursery Jaws Jr.? Light weight (400-450lbs.) for smaller loaders; compact for use in tight spaces; (50" or 66" forks), and narrow fork spacing (parallel at 18").

NURSERY JAWS 1

What materials will the NJ1 handle? Up to 44" B&B; 24" boxes; plastic containers; rocks & boulders.

Loader requirements? 1500lbs - 3000lbs rated lift capacity.

Characteristics of the Nursery Jaws 1? Simple to use, durable, same side loading and unloading (66" or 72" forks); double stacking and planting.

NURSERY JAWS 2

What materials will the NJ2 handle? Up to 50" B&B; 32" boxes (up to 36" with expanded model); plastic containers; grow-bags; rocks & boulders.

Loader requirements? 1500lbs - 3000lbs rated lift capacity.

Characteristics of the Nursery Jaws 2? It has 2 functions to adjust parallel width of the forks. This allows easier handling of small, large and multiple B & B, boxes and container trees; same side loading and unloading (66" or 72" forks), planting, placing large boulders, and building boulder walls.

Next Generation Nursery Jaws

What materials will the NG NJ handle? Up to 65" B&B, up to 36" boxes (up to 48" with the expanded model); plastic containers; grow-bags; rocks & boulders up to 2 1/2 tons.

Loader requirements? 2000lbs - 4500lbs rated lift capacity.

Characteristics of the Next Generation Nursery Jaws? It has 2 functions to adjust parallel width of forks, but has a wider range of adjustment than the NJ2. It can handle materials either by using the pivot fork or parallel movement of the pivot arm. Same principle as NJ2 with increased capability, capacity & durability.

NURSERY JAWS Hybrid

What materials will the NJ Hybrid handle? Up to 60" B&B; up to 32" boxes; plastic containers; grow-bags; boulders.

Loader requirements? 1500lbs - 3000lbs rated lift capacity.

Characteristics of the Nursery Jaws Hybrid? Load, move and plant B&B, boxed and container trees, boulders, and move pallets. Manually adjustable pivot point allows for wider and narrower parallel spacing than the Nursery Jaws 2.
